

# HCI 510 – Final High-Fidelity Prototype-Group 3

Tina Gada, Joe Gray, Ahmajdan A, Heather Rohr, Eian Prinsen,

Please submit a link to your high-fidelity prototype hosted on Axure/XD servers. Submit the original Axure/XD file too. If you're submitting multiple files, submit a zip file.

Your final prototype will be graded on how well you have incorporated the findings from your user-based evaluation. This should be final prototype that is ready to be shipped!

## Online link to the prototype:

Provide a link to the prototype.

## User-based Evaluation Findings

Copy and paste your design recommendations from the final UX Report. For each recommendation, explain how you incorporated it into the final design of the prototype. A two-column table usually works well:

Design Recommendation	How it is reflected in the final prototype
Results Section was unclear	We changed the design from an image based graph to a text block explanation.
Breathing function didn't work	We struggled to get the breathing animation function to work, we were able to get this to work and now have an expanding and contracting circle.
The disclaimer text on the results page looked somewhat large; it could be smaller.	The text was decreased in size from 18 to 14 point font.
On the survey page, you show the question stem and item: Over the last two weeks.... Feeling lonely....I would change the color of the item to make it distinguishable from the question stem.	The stem and question section were separated by bold and regular font, We tried changing the color but couldn't visually pull it off.

Currently, the app starts with the questionnaires, but there is no global navigation menu that would enable the user to do some breathing exercises without completing the surveys. A main screen with different buttons for surveys, exercises, specialists, and profile info could be useful.

A global navigation menu was added that users see before the survey option to allow direct access to the breathing exercises page.

## Style Guide

Please also submit a one-page style guide for your prototype. Your guide should include information about the color palette (sample color and hex codes), typography (font type, size, and weight), header and body text size, button looks (shape and feedback). Please refer to the following page <https://www.toptal.com/designers/ui/ui-styleguide-better-ux>. These examples are slightly more comprehensive than what I am looking for in this project.
